

Decision Quality for Leaders

Background information

Decision making is a fundamental, yet neglected, route to improvement. Advance your practice with this MDSN programme

Decision making is a core leadership skill...

...and better decision making = better results.

Yet leaders rarely get a chance to focus on decision making...

...and their teams / organisations / ICS often lack frameworks and tools needed to improve decision quality.

So [MDSN](#) is offering this two-day programme on strategic decision making.

Drawing insights from decision science, it is experiential, practical and with plenty of time to apply to your context...

...leaving you thinking differently, inspired and with plans for improvement.

The [Strategy Unit](#), working on behalf of the [Midlands Decision Support Network](#), has devised a development programme to improve decision quality. It is designed for leaders from across health and care services.

The 'Decision Quality for Leaders' programme starts from the premise that decision making is utterly fundamental - but that very few leaders, organisations or systems focus specific attention on it.

The programme was designed using insights from the literature and a recent residential with senior decision makers in the Midlands. Sessions are highly applied; participants value learning from the evidence and each other. Feedback has been excellent and participants often cite subsequent changes in their decision making practice.

Day 1 starts with a broad exploration of strategic decision making, and the evidence on what characterises better / worse practice. It then gets progressively more applied and specific. So, by the end of Day 2, participants are equipped with tools, frameworks, methods and plans for improving decision quality.

See [this short video](#) and [these blogs](#) for more information.
